WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

November 3, 2026

Flash Flood Threat

Florida

- Back-to-back historic rainfall events are hammering Florida, with parts of the state seeing up to 20 inches of rain in just 12 hours as millions face an ongoing threat of severe storms and dangerous flooding.
- Radar estimates indicate 18 to 20 inches of rain fell in 12 hours just south of Palm Bay. According to NOAA, anything over 15.5 inches in 12 hours makes this a 1,000-year flood event.
- The historic rainfall has prompted emergency declarations and warnings across parts of Florida.
- Gov. Ron DeSantis issued a state of emergency Monday for seven counties to expedite resources and assistance to communities impacted by the flooding.
- Another round of heavy rain will douse Florida throughout the day today, as much of the state's east coast is under a Level 2 out of 4 flash flood threat.
- This includes major cities such as Miami, Jacksonville, West Palm Beach, Fort Lauderdale, Melbourne and Key Largo.
- This comes as the region was already drenched on Sunday. Repeated rounds of heavy rain could quickly lead to flooding issues.
- The most intense rainfall will begin to fade later this afternoon, but the recent rainfall has already left the ground more saturated than normal, keeping the threat of flooding in play.

Southern U.S.

- A powerful cross-country storm that caused wide-spread flooding across the Four Corners region is moving through the Central U.S., bringing heavy rain and the potential for severe thunderstorms and flash flooding across the Mid-South and Midwest on Election Day, with more than 35 states and 120 million people expected to be affected by the system by the end of the week.
- As the system pushes east, southern portions of the Mississippi River and Tennessee valleys will see periods of heavy rain through the day with an isolated tornado threat beginning in the afternoon.
- Parts of the Midwest will see heavy rain and strong wind gusts throughout the day into Wednesday.
- Widespread rain is forecast to reach the Mid-Atlantic and the Northeast by Thursday.
- The storm brought heavy rain to parts of the Southwest and Four Corners region, including Arizona, southern Utah, northwestern New Mexico and southwestern Colorado, where flooding inundated several communities.
- In response to the widespread flooding, Gov. Katie Hobbs declared a statewide state of emergency Monday to unlock critical funding and state resources for Arizona communities impacted by the recent storms.
- States of emergency were also declared in Utah and Colorado, with significant flooding still lingering along the San Juan River.
- Storms will race across the South through the day, bringing the threat of damaging winds and a few tornadoes to parts of Louisiana, Mississippi, Arkansas and Alabama.
- n addition to the severe weather threat, 1 to 2 inches of rain are expected, with localized amounts of 2 to 3 inches possible. This could lead to isolated instances of flash flooding.
- A Level 2 out of 4 flash flood risk remains in effect through Tuesday night across northern Mississippi and southwestern Tennessee, including Memphis.
- Heavy rain is expected to spread across Missouri, Iowa, Nebraska, Illinois, Minnesota and Wisconsin Tuesday.
- According to the FOX Forecast Center, wind gusts of 40 to 50 mph are possible from eastern Kansas and Nebraska through Iowa, Minnesota and Wisconsin.

November 3, 2026

Tropical Activity – Atlantic

Disturbance 1

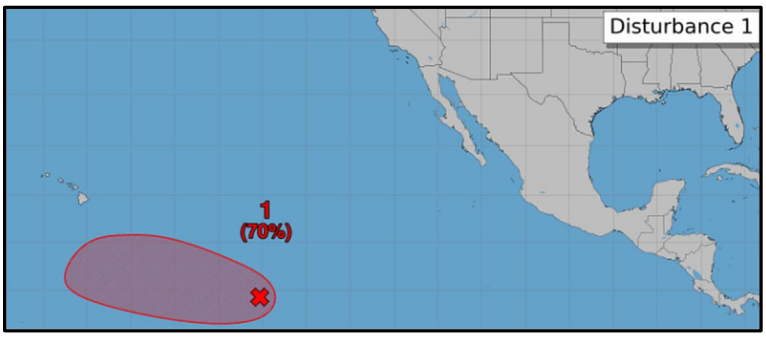

- Area of low pressure is expected to form along the weakening frontal boundary a few hundred miles south of Bermuda over the next day or so.
- Chances of subtropical development decrease by this weekend when the system is expected to move generally eastward.
- Formation chance – 48 hours: Low (10%); 7 days: Low (30%)

Tropical Activity – Central and Eastern Pacific

Disturbance 1

- Located well east-southeast of the Hawaiian Islands.
- Conditions appear generally favorable for some gradual development of this system and a tropical depression is likely to form during the next few days.
- Moving westward to west-northwestward around 10 to 15 mph.
- Formation chance through 48 hours: Med (40%); 7 days: High (70%)

Joint Preliminary Damage Assessments				
State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
NM	Severe Flooding Sep 28 and continuing	8	4	10/20 – TBD
