WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

November 16, 2026

Flash Flood Risk

Florida

- An active week is projected for parts of Florida, AccuWeather meteorologists warn.
- "A persistent easterly to northeasterly flow from the Atlantic Ocean will bring copious amounts of moisture into southeastern Florida this week. Numerous showers and downpours will persist along the coast of southeast Florida from Tuesday through Friday," explained AccuWeather Senior Meteorologist Dan Pydynowski.
- Localized flooding can occur on streets and poor drainage areas, especially in zones that have recently received plenty of rain.
- "Some areas like West Palm Beach already saw over a foot of rain in 48 hours at the start of the month, and these same areas could get hit by several inches of rain again later this week given this setup. Areas that already saw a lot of rain earlier this month will be especially susceptible to street and highway flooding with the ground already being saturated," added Pydynowski.
- A general 1-2 inches of rain is expected along the east coast of Florida from Tuesday to Friday; however, a narrow band of 3-4 inches may be possible where the most persistent downpours develop.
- Regardless of where the heaviest rainfall sets up this week, the persistent winds blowing off the Atlantic Ocean up against the eastern coastline of Florida will push water inland to a degree, promoting some minor coastal flooding. This can be worsened during times of high tide.

Pending Individual Assistance Declaration Requests

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
IN*	Severe Storms, Straight-Line Winds, Tornadoes and Flooding Jun 6-26	8/6/26	Pending	9 Counties
WA	Wildfires Jul 23 – Aug 31	9/25/26	Pending	4 Counties/1 Tribe
TN*	Severe Storms and Straight-Line Winds Aug 22 (Appeal)	9/8/26	Pending	1 County
AL*	Hurricane Isaias Oct 7-12	10/23/26	Pending	3 Counties
