WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 20, 2026

Nor'easter

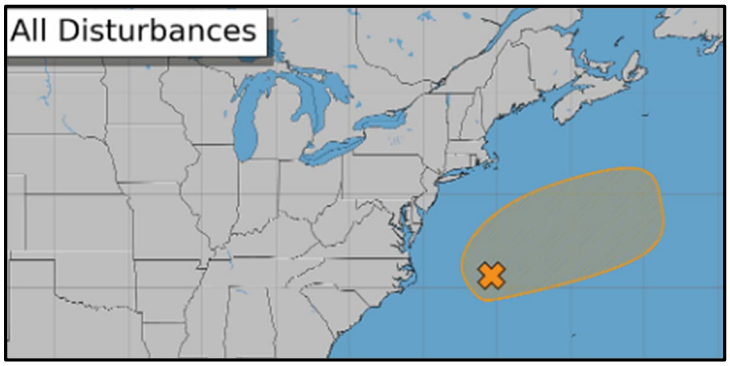

Carolinas/Mid-Atlantic

- A powerful nor'easter spinning off the North Carolina coast is expected to bring coastal flooding, beach erosion, gusty winds, dangerous surf and rip currents to parts of the Mid-Atlantic and Southeast coasts through Thursday.
- This storm has also been tagged by the National Hurricane Center (NHC) as Invest 93L.
- 93L is currently forecast to remain offshore and begin to pull away from the coast by the end of the week.
- Regardless of tropical development, North Carolina's Outer Banks and the Delmarva coasts will see days of coastal high tide flooding, gusty winds and beach erosion.
- A mandatory evacuation is in effect on Hatteras Island as storm conditions are expected to worsen, with the potential for significant ocean overwash.
- The main concern for the Outer Banks region will be prolonged periods of wind gusts over 40 mph, fueling moderate coastal flooding and destructive waves.
- The worst of the flooding will stretch from the Outer Banks into Chesapeake Bay and up through Ocean City, Maryland, where water levels are expected to rise more than two feet above normal during high tide.
- The highest waves and greatest coastal flooding risk are expected during afternoon and evening high tides, which occur between 3 and 7 p.m., depending on the location.

Tropical Activity – Atlantic

Disturbance 1

- Located a few hundred miles off the North Carolina coast.
- The system is expected to accelerate northeastward away from the eastern United States.
- Conditions are expected to become unfavorable for development.
- Formation chance through 48 hours: Med (40%); 7-days: Med (40%)

Tropical Activity – Eastern Pacific

Disturbance 1

- Located a few hundred miles south of the Gulf of Tehuantepec.
- A tropical depression is forecast to form during the next day or so.
- The system is expected to move westward to west-northwestward at around 10 mph during the next few days.
- Formation chance through 48 hours: High (90%); 7-days: High (90%)
