WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

November 9, 2026

Atmospheric River

Southwestern U.S.

- A succession of Pacific disturbances will bring periods of rain, initially focusing on the Pacific Northwest before gradually shifting south toward California later in the week.
- The pattern is already making its presence felt across the Northwest. Overnight Saturday into Sunday, nearly 100,000 customers lost power across Washington as powerful wind gusts swept through the region.
- Winds in the lower elevations were near 50 to 60 mph, while higher elevations saw even stronger gusts. Near Mount Rainier, a gust of 95 mph was recorded.
- Other notable wind gusts included 93 mph at Crystal Mountain, 85 mph at Snoqualmie Pass and 73 mph near Mount Baker.
- The active pattern will continue into next week as a strong westerly flow aloft will aim the Pacific moisture toward western Washington, Oregon and far northwestern California.
- After several days of rain, soils across Washington and Oregon will become increasingly saturated, raising concern for minor river flooding in vulnerable areas.
- While this is not expected to be an extreme atmospheric river event, it signals the beginning of a more active weather pattern as the jet stream gradually shifts southward.
- The combination of persistent rain and gusty winds along the immediate coast will make for a dreary week across much of the West Coast.
- Western Washington is expected to see the highest rainfall totals, with some areas potentially receiving 5 to 8 inches or more through the week.
- Away from the coast, lower-elevation rainfall totals will be from 1 to 3 inches, gradually increasing closer to coastal communities.

Tropical Activity – Central and Eastern Pacific

Disturbance 1

- Located several hundred miles offshore of El Salvador and Nicaragua.
- Environmental conditions are expected to remain unfavorable for development and the system drifts westward or west-southwestward away from land.
- Formation chance – 48 hours: Low (10%); 7 days: Low (10%)

November 9, 2026

Tropical Storm Pena

- Located about 560 miles SSW of South Point Hawaii with maximum sustained winds of 45 mph.
- Pena is moving toward the west near 9 mph and this motion is expected to continue during the next couple of days.
- Tropical-storm-force winds extend outward up to 45 miles from the center.

Pending Individual Assistance Declaration Requests

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
IN*	Severe Storms, Straight-Line Winds, Tornadoes and Flooding Jun 6-26	8/6/26	Pending	9 Counties
WA	Wildfires Jul 23 – Aug 31	9/25/26	Pending	4 Counties/1 Tribe
TN*	Severe Storms and Straight-Line Winds Appeal Aug 22	9/8/26	Pending	1 County
AL*	Hurricane Isaias Oct 7-12	10/23/26	Pending	3 Counties
TX*	Flooding Appeal July 2026	10/27/26	APPROVED	20 Counties
NM	Flooding Oct 22-30	11/2/26	Pending	4 Counties/2 Pueblos

*Award of task order to contractor pending

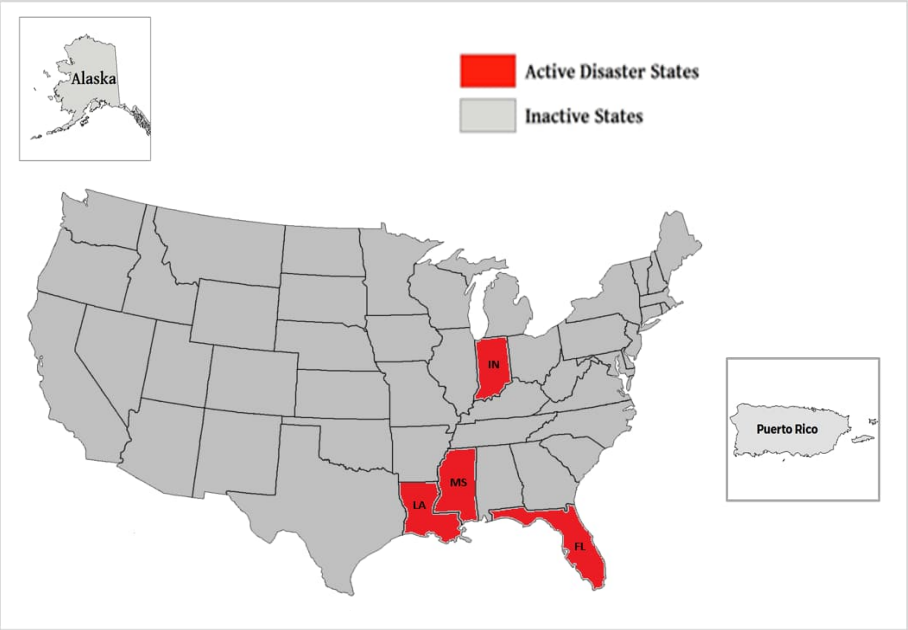

WSP USA Inspection Services Active Disasters

Disaster Number and State	Disaster Type	Number of Counties Declared	Days Since Launch	Registration Deadline
4927 - LA	Tropical Storm Arthur	6 Parishes	122	10/1/2026
4930 – MS	Tropical Storm Arthur	4 Counties	95	10/3/2026
4933 - IN	Severe Storm & Tornadoes	21 Counties	67	10/25/2026
4955 – FL	Hurricane Isaias	8 Counties	8	12/28/2026
