WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 26, 2026

Potential Tropical Activity – Atlantic

- AccuWeather's hurricane experts are monitoring one area close to the coast of the United States for potential tropical development leading up to Halloween.
- Whether or not the area being monitored develops into a tropical entity, there will still be effects along the coast.
- "Persistent onshore flow and ongoing King Tides along many Southeast beaches has resulted in minor to moderate coastal and tidal flooding in recent days and is expected to continue into this week," explained AccuWeather meteorologist Brandon Buckingham.
- There are currently a couple of factors inhibiting tropical development.
- "In the short term, strong wind shear and a front nearby may prevent any brewing storm from becoming tropical," said AccuWeather Lead Hurricane Expert Alex DaSilva.
- As the onshore flow continues through much of this week, the piling up of water along the coast will make the coastal flooding worse.
- "Moderate to major flooding is expected with places like Charleston, South Carolina, expected to see their highest levels during Monday's and Tuesday's high tides," warned Buckingham.
- There will be localized flooding concerns farther inland due to downpours and the system's slow-moving nature.
- "Florida's Atlantic coast will face the brunt of wet weather from the storm sitting offshore where locally heavy rain can compound impacts when also factoring in the windy conditions and high astronomical tides," cautioned Buckingham.
- The storm could also become subtropical, just as Josephine was. If a tropical or subtropical storm forms, it would be named Kyle.

Tropical Activity – Central & Eastern Pacific

Tropical Storm Vance

- Located about 260 miles SSW of Manzanillo Mexico moving northwest near 6 mph with maximum sustained winds of 65 mph.
- A west-northwestward motion is expected over the next day or so, followed by a turn toward the north around midweek.
- Gradual weakening is forecast for the next several days.
- Tropical-storm-force winds extend outward up to 140 miles from the center.

October 26, 2026

Tropical Storm Olana

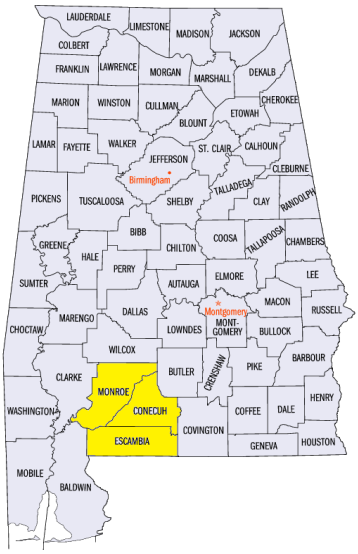

- Located about 490 miles WSW of Johnson Island moving east near 7 mph with maximum sustained winds of 40 mph with higher gusts.
- Gradual weakening is expected and Olana is now forecast to become a remnant low in a day or so.
- Tropical-storm-force winds extend outward up to 45 miles from the center.

Disaster Declaration Request

Alabama

- On October 23, 2026, Alabama Governor Kay Ivey submitted a request for a federal major disaster declaration following Hurricane Isaias.
- Individual Assistance was requested for three Counties (Monroe, Conecuh and Escambia).
- Hurricane Isaias brought strong winds and heavy rain to Alabama, resulting in downed trees, power outages, road closures, communications disruptions, and damage to homes and public infrastructure.
- State officials reported two storm-related deaths in an October 10 update.
- The hurricane made landfall near Destin, Florida, on October 9, before moving into Alabama and weakening.
- On Oct 7, Governor Kay Ivey declared a state of emergency covering 40 Alabama counties in preparation for the storm.

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
NM	Severe Flooding Sep 28 and continuing	8	4	10/20 – TBD
