WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 7, 2026

Tropical Activity – Atlantic

Tropical Storm Isaias

- Tropical Storm Isaias has formed in the southern Gulf and is forecast to rapidly intensify into a dangerous Category 2 hurricane and charge toward the northern Gulf Coast later this week.
- Florida Governor Ron DeSantis has already declared a state of emergency ahead of the storm.
- Isaias is expected to approach the coast by Friday, with landfall currently estimated to be sometime late Friday or early Saturday between Biloxi, Mississippi, and Panama City, Florida.
- Isaias strengthened from Tropical Depression Nine in the Bay of Campeche early Wednesday and has sustained winds of 40 mph and is moving east-northeast at 8 mph.
- According to the FOX Forecast Center, Isaias is expected to rapidly intensify with winds going from 40 mph to 75 mph between Wednesday morning and 2 a.m. Thursday. Additionally, winds are expected to ramp up and reach 110 mph between 2 a.m. Thursday and 2 a.m. Friday.
- Isaias' forecast cone shows it heading directly toward the northern Gulf Coast, with impacts centered over roughly 30 million people in Louisiana, Alabama, Mississippi and the Florida Panhandle.
- Heavy rain is expected to begin on Friday, with flash flooding, damaging wind gusts, storm surge and even tornadoes possible as the storm comes ashore.
- There is still some uncertainty regarding exactly where and how strong Isaias will be at landfall.
- Isaias is forecast to remain in the southern Gulf for much of the day on Thursday, bringing heavy rain to the Yucatán Peninsula, before making a sharp turn towards the northern Gulf Coast as it's grabbed by a strong dip in the jet stream.

- The storm is expected to continue to strengthen and rapidly accelerate early Friday, with heavy rain reaching parts of the Gulf Coast as early as Friday morning.
- FOX Weather Hurricane Specialist Bryan Norcross said most of the storm's most impactful weather will most likely be on the right side of the storm's center.

October 7, 2026

- NOAA's Weather Prediction Center (WPC) has issued a flash flood risk for Friday across portions of Louisiana, Mississippi, Alabama, Florida, Georgia, as well as southern portions of Tennessee, southwestern North Carolina and western South Carolina.
- A Level 3 out of 4 flash flood risk covers Mobile, Alabama, and the Florida Panhandle west of Panama City. A Level 2 risk includes Atlanta and Montgomery, Alabama, and eventually shifts inland into Saturday to include the Carolinas and Tennessee Valley.
- "Rainfall estimates currently show 6-10 inches with localized higher amounts which will lead to flash and urban flooding and eventually river flooding," the FOX Forecast Center said.

Tropical Activity – Eastern Pacific

Hurricane Rachel (CAT 1)

- Located 740 miles W of southern tip of Baja California moving west-northwest near 7 mph.
- Maximum sustained winds are 80 mph with higher gusts with gradual weakening is forecasted over the next few days.
- Hurricane-force winds extend outward up to 35 miles from the center and tropical-storm-force winds extend outward up to 140 miles.

Disturbance 1

- Located offshore of Southern Mexico.
- Environmental conditions appear favorable for gradual development, and this system is expected to become a tropical depression within a day or so.
- Moving slowly west-northwestward to northwestward for the next few days.
- Formation chance – 48-hour: High (90%); 7-day: High (90%)

Disturbance 2

- Area if low pressure is forecast to form south of the coast of Guatemala during early portion of next week.
- Conditions appear conducive for some gradual development for this system thereafter while it moves generally west-northwestward around 10 mph.
- Formation chance – 48-hour: Low (near 0%); 7-day: Low (30%)
