WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 15, 2026

Aftermath of Isaias

Florida

- It's been five days since Hurricane Isaias hit Northwest Florida, uprooting trees, knocking down powerlines and crushing homes.
- The storm brought destructive hurricane-force winds to portions of the western Florida Panhandle and south-central Alabama. An Extreme Wind Warning was issued as the eyewall moved ashore, and some of the strongest reported wind gusts reached 118 mph in Jay, Florida; 116 mph in Oriole Beach and 114 mph at Whiting Field South.
- Storm surge caused coastal inundation and beach erosion, particularly along the Okaloosa County coastline. Water levels reached nearly 4 feet above the local mean higher high water at Old Pass Lagoon and more than 3.5 feet at East Pass in Destin.
- Meanwhile, torrential rainfall triggered significant flash flooding across the western Panhandle. Widespread rainfall totals of 5–8 inches were reported, with localized amounts exceeding 11 inches. The highest total in the report was 11.65 inches near Mary Esther, Florida.
- Escambia, Santa Rosa and Okaloosa County crews have been working to estimate the dollar amount of damages the storm caused.
- Pensacola Mayor D.C. Reeves said so far, private property owners in the city have reported an estimated $70 million in damage from Hurricane Isaias.
- "That's a significant number, and that will continue to climb as our damage assessment teams are out," Reeves said.
- The number Reeves reported is only an initial estimate for the city of Pensacola. Escambia County hasn't announced what the estimate is for the unincorporated areas of the county.
- Reeves added he has little doubt that Escambia County and Pensacola will meet the federal damage criteria needed to unlock individual federal assistance.
- Santa Rosa County is reporting damage to more than 2,000 structures, destroying over 80 and leaving around 300 with major damage.

Alabama

- Alabama Governor Kay Ivey provided an update Wednesday regarding the impacts of Hurricane Isaias as many in the southern part of the state, including in the Wiregrass, continue to recover.
- “This hurricane took a toll on parts of Alabama,” Gov. Ivey said in a statement. “I am truly grateful to the emergency management officials at all levels, as well as first responders, law enforcement, power crews and all involved in storm cleanup.”
- Right now, the governor says, cleanup and damage assessment efforts are currently ongoing by state emergency management officials, with the current focus being in Coffee, Houston, Monroe, Escambia and Conecuh counties.

WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 15, 2026

Tropical Activity – Eastern Pacific

Tropical Storm Simon

- Located 200 miles WSW of Cabo Corrientes, Mexico.
- Moving is stationary with maximum sustained winds of 60 mph.
- Gradual weakening is expected during the next few days; forecast to become a post-tropical remnant low by late this weekend.

Hurricane Trudy (CAT 1)

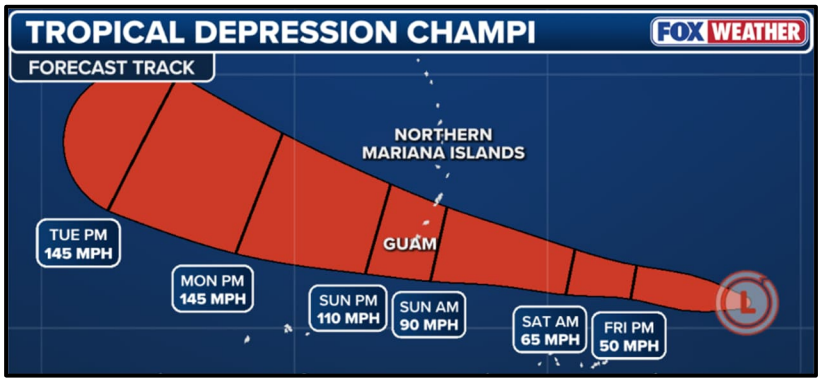

- Located 300 miles SSW of Acapulco Mexico, moving NW at near 9 mph with maximum sustained winds of 75 mph.
- A turn to the north-northwest is expected during the next day or two, followed by a turn back toward the northwest this weekend.
- On the forecast track, Trudy is expected to approach the coast of southwestern and west-central Mexico this weekend.

Disturbance 1

- Area of low pressure is forecast to form offshore of southern Mexico during the early to middle part of next week.
- Conditions appear conducive for some gradual development.
- Formation chance through 48 hours: Low (near 0%); 7-days: Low (30%)

Tropical Activity – Western Pacific

Tropical Depression Champi

- Located 895 miles E of Guam, moving WNW at 10 mph with maximum sustained winds of 35 mph.
- Champi is forecast to maintain intensity over the next few days, possibly becoming a tropical storm later this evening and a typhoon Saturday.
- Tropical Depression Champi presents a potential threat to Guam and the Commonwealth of the Northern Mariana Islands (CNMI) over the weekend.
- The system could undergo rapid intensification over the next few days and could reach Guam and CNMI at super typhoon strength.
