WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

November 2, 2026

Severe Storm Threat

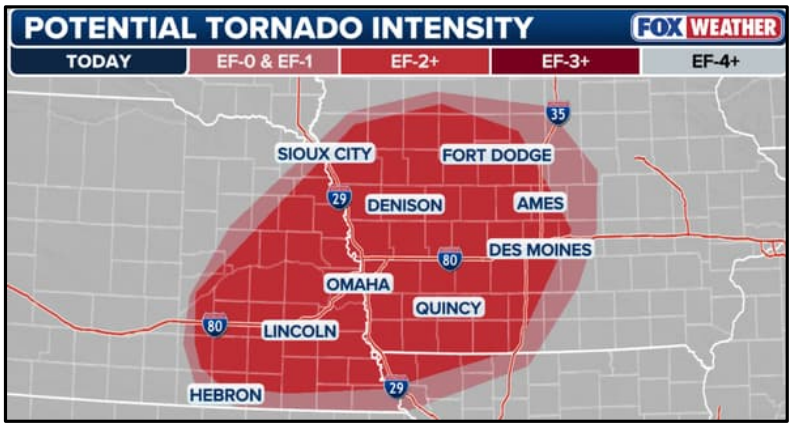

Central U.S.

- A massive cross-country storm is set to impact more than 35 states, bringing severe weather, heavy rain and strong winds across the Central and Southern Plains before moving toward the East Coast later this week.
- As the system pushes east, a strengthening area of low pressure and an advancing cold front will bring severe thunderstorms, damaging winds and additional rainfall to the Plains and Midwest before reaching the Northeast later in the week.
- The storm is already bringing heavy rain to parts of the Southwest and Four Corners region, including Arizona, southern Utah, northwest New Mexico and southwest Colorado, where ongoing flooding is threatening communities.
- Mandatory evacuations are in place for parts of the region as rapidly rising water levels threaten homes, roads and businesses.
- In Sedona, Arizona, portions of the city were urged to evacuate as Oak Creek continued to rise. The creek has reached a record level, raising concerns about major flooding.
- The Weather Prediction Center has issued a Level 3 out of 4 flash flood risk across more than 65,000 square miles — roughly the size of Washington state — encompassing nearly all of central and northern Arizona and putting more than four million people at risk.
- Across central and northern Arizona into southern Utah, the heaviest rainfall is expected along and north of the Mogollon Rim, including the high country around Flagstaff.
- According to the FOX Forecast Center, widespread rainfall totals of 3 to 5 inches are possible, with isolated amounts approaching 6 inches.
- Southwest Colorado is also getting drenched, particularly near the San Juan Mountains. Mandatory evacuations were issued for homes and properties in Pagosa Springs on Saturday, according to town officials.
- A Particularly Dangerous Situation Flood Warning is in effect for the San Juan River near Pagosa Springs, Colorado. The river is forecast to rise to around 19 to 20 feet at some point this morning.
- The highest elevations of the San Juan, Sawatch, Wasatch and Uinta ranges could receive more than a foot of wet, heavy snow.
- Southwest Colorado's mountain passes could see 12 to 18 inches, with 4 to 10 inches possible across other high-elevation areas.

November 2, 2026

- Strong winds will add to the already dangerous conditions. Southwesterly winds could gust between 30 and 50 mph Sunday across mountain ridges.
- While flooding and mountain snow remain major concerns across the Southwest, the storm is expected to shift east of the Rockies on Monday, bringing a renewed threat of severe thunderstorms, damaging winds and heavy rain to the Central and Southern Plains.
- Severe thunderstorms are expected to develop in the afternoon and evening across parts of Kansas, Oklahoma and north Texas as a cold front and dryline push through the region.
- The Storm Prediction Center has issued a Level 2 out of 5 severe storm risk across parts of south-central and eastern Kansas, western and central Oklahoma and north Texas.
- The main threat will be damaging straight-line winds, but a few tornadoes could still develop. The severe threat will gradually decrease as the storms move east.
- On Tuesday, the cold front will move into the Deep South, bringing the threat of damaging winds to states including Louisiana, Mississippi, Arkansas and Alabama.
- As a result, a Level 2 out of 4 flash flood risk is in effect across northern Mississippi and southwest Tennessee, including Memphis, as around 1 to 2 inches of rain are expected.
- The storm will move toward the Upper Midwest on Wednesday, bringing gusty winds and periods of heavy rain to the region.
- Heavy rain is expected to spread across Texas and Oklahoma through Missouri, Iowa, Nebraska, Illinois, Minnesota and Wisconsin as moisture from the South moves north.
- Many locations could receive 1 to 2 inches of rain or more, the FOX Forecast Center said.

Tropical Activity – Atlantic

Disturbance 1

- Area of low pressure is likely to form along the weakening frontal boundary a few hundred miles northeast of the Bahamas in a couple of days.
- The system could acquire some subtropical characteristics late this week
- Formation chance – 48 hours: Low (near 0%); 7 days: Low (20%)

Tropical Activity – Central and Eastern Pacific

Disturbance 1

- Located well SE of the Hawaiian Islands.
- Environmental conditions appear generally favorable for some gradual development and a tropical depression is likely to form by the middle to latter portions of this week.
- Formation chance through 48 hours: Low (20%); 7 days: High (70%)

Joint Preliminary Damage Assessments

State	Event	Number of Counties for IA		Start-End
		Requested	Completed	
NM	Severe Flooding Sep 28 and continuing	8	4	10/20 – TBD

Pending Individual Assistance Declaration Requests

State	Event	Date Submitted	Approved/Denied/ Pending	Number of Counties/Tribes
IN*	Severe Storms, Straight-Line Winds, Tornadoes and Flooding Jun 6-26	8/6/26	Pending	9 Counties
WA	Wildfires Jul 23 – Aug 31	9/25/26	Pending	4 Counties/1 Tribe
TN*	Severe Storms and Straight-Line Winds Appeal Aug 22	9/8/26	Pending	1 County
AL*	Hurricane Isaias Oct 7-12	10/23/26	Pending	3 Counties
TX*	Flooding Appeal July 2026	10/27/26	Pending	20 Counties

*Award of task order to contractor pending
