WSP USA FIELD SERVICES DISASTER AWARENESS REPORT

October 16, 2026

Tropical Activity – Western Pacific

Tropical Storm Champi

- Champi is approximately 510 miles ESE of Guam with maximum sustained winds up to 60 mph and is expected to turn WNW with a slight increase in forward speed through Saturday as it continues toward CNMI.
- Tropical-storm-force winds currently extend up to 100 miles outward from center.
- Champi is forecast to track over or near Guam Saturday evening approaching CAT-3 intensity and is expected to go through a period of rapid intensification over the next 24 hours.
- A Typhoon Warning was issued for Guam and Rota, and a Tropical Storm Warning was issued for Tinian and Saipan.
- Tropical storm-force winds are most likely to arrive on the islands on Saturday (ET).
- This system could produce 12 to 20 inches of rain over Guam, 10 to 18 inches of rain over Rota, and 8 to 12 inches of rain over Tinian and Saipan.
- Flash flooding is possible across the Mariana Islands this weekend into early next week, most significantly over Guam and Rota. Mudslides are possible in areas of steep terrain.
- Significant coastal inundation is expected, especially along eastern and southern exposures, potentially reaching upwards of 5 to 7 feet in Guam; 3 to 4 feet in Rota, and 2 to 3 feet in Tinian and Saipan as Champi approaches.

Tropical Activity – Eastern Pacific

Hurricane Trudy (CAT 3)

- Located 240 miles SW of Acapulco Mexico, moving NW at near 6 mph with maximum sustained winds are near 120 mph with higher gusts.
- A north-northwestward to northwestward motion at a slightly faster forward speed is forecast during the next few days.
- Strengthening is expected through Saturday, and Trudy is forecast to remain a major hurricane when it makes its closest approach to Mexico.
- Some weakening is predicted later this weekend and into early next week.
- Hurricane-force winds extend outward up to 30 miles from the center and tropical-storm-force winds extend outward up to 140 miles.

Tropical Storm Simon

- Located 205 miles W of Cabo Corrientes, Mexico and is moving NW near 9 mph with maximum sustained winds of 40 mph.
- Continued weakening is expected, and Simon is forecast to become a post-tropical remnant low in a day or so.

Disturbance 1

- Area of low pressure is forecast to form offshore of southern Mexico during the early to middle part of next week.
- Conditions appear conducive for some gradual development and a tropical depression could form during the latter half of next week.
- Moving westward to WNW over the eastern and central portion of the East Pacific.
- Formation chance through 48 hours: Low (near 0%); 7-days: Med (60%)
